IRRIGATION PUMPING SYSTEMS

Irrigation is unquestionably a significant part of the agricultural landscape in Canada. In recent years, it has seen rapid expansion in part due to advances in pumps, pipe materials and control systems technology.

New areas that were previously deemed unsuitable for irrigation are now being developed at an ever-expanding rate.

MPE has been involved in the development of many of these projects throughout Alberta and Saskatchewan.

Our services include the following:

- ◆ Lake Diefenbaker Pumping Stations and Pipelines
- ◆ Small-scale Irrigation Pumping Plants
- ◆ Electrical and Mechanical Design
- ◆ SCADA and Automation
- ◆ Solar-powered Livestock Watering Systems
- ◆ GIS and Aerial Mapping
